DESCRIPTION
The MC6 transducers resolve applied loads into orthogonal force and moment components. These precision sensors feature high stiffness, high sensitivity, low crosstalk, excellent repeatability and long term stability. They exhibit the inherent ruggedness of bonded strain gage transducers and they incorporate special seals to prevent water and oil contamination.

The MC6 transducer is available with one to six outputs corresponding to Fx, Fy, Fz, Mx, My, and Mz. Standard vertical load capacities are 1000, 2000, and 4000 pounds. Horizontal load capacities are half of the vertical rating. Models with custom capacities and layouts are available for special applications.

The instrument has a six-inch square top mounting surface equipped with threaded inserts. A high-strength aluminum alloy (7075-T6) is used throughout to withstand harsh manufacturing and testing environments. A durable anodized finish protects the exterior from corrosion while elastomeric O-ring seals protect the strain gages and wiring. Internal potting of the strain gages further insures long life and consistent, reliable performance.

AMPLIFICATION
The MC6 transducer incorporates strain gages and four precision elements in a patented design* to isolate and measure applied forces and moments. As with all conventional strain gage transducers, bridge excitation and signal amplification are required. AMTI’s MCA series amplifiers are high-gain devices which provide excitation and amplification for multiple channels in one convenient package. These amplifiers process the signals from a transducer and provide outputs suitable for an A/D converter and digital computer or other recording instrument.

APPLICATIONS
This instrument is particularly suitable for applications requiring simultaneous measurement of several forces and moments, or measurement of forces that change direction and position over time. Common applications for this transducer include research and development in robotics, ergonomics, biomechanics, and dynamics. These sensors are also well suited for monitoring production processes.

SPECIFICATIONS
The accompanying specifications are for estimating purposes. Actual precision calibrations are furnished with each instrument. The manufacturer reserves the right to alter the specifications without notice.

GENERAL SPECIFICATIONS
Excitation: 10V
Temperature Range: 0 to 125°C (-17 to 52°C)
Sensitivity change with temperature: 0.02%/°F (0.01%/°C)
Crosstalk: Less than 2% on all channels
Weight: 13 lb (6 Kg)

WIRING
Connector Type: Burndy BT02E16-26P

MC6 — X — XXXX

Series
No. of Channels
Capacity

- Hole-down inserts: 3/8-16 thread, 9 holes on 2.37 inch (6.01) centers.
- Metric threaded hold-down inserts available.
- Six .056 inch (1.42) mounting slots on 2.0 by 7.5 inch (5.1 by 19.0) centers.
- All dimensions in inches (cm).
